SUMMARY

Computer Science Engineering student with hands-on experience in full-stack web development (Python, React, SQL, MongoDB) and IoT systems. I enjoy creating practical, user-focused applications and integrating hardware with cloud platforms for real-time monitoring. Strong problem solver with a drive to build efficient software.

PROJECTS

Sales Analytics Dashboard

- Designed and built a multi-user sales analytics platform with secure authentication and user-specific data tracking.
- Developed a relational database to manage products and sales records efficiently.
- Generated insights by visualizing monthly trends using Pandas and Matplotlib.
- Created a responsive web interface for seamless data entry and visualization.

IoT Smart Agriculture Monitoring System

- Developing a real-time monitoring and autonomous irrigation system using ESP32
- Integrating multiple sensors including soil moisture, temperature, humidity, and additional environmental sensors for enhanced accuracy
- Implementing automated irrigation control based on real-time soil and environmental conditions
- Integrating Firebase for live data updates and remote monitoring

SKILLS

Languages	C/C++, Pandas, JavaScript
Frameworks	Django, Flask, React
Libraries	Pandas, Matplotlib, NumPy
Databases	MySQL, MongoDB, SQLite, Firebase
Other Skills	Arduino IDE, Embedded C / C++, ESP32

EDUCATION

B.Tech CSE (IoT & Cyber Security)

2020-2028

Sikkim Manipal Institute of Technology

- **Relevant Courses:** Data Structures, Object Oriented Programing, IoT and Microcontrollers, Databases
